

Clean

Drain

Dry

Your watercraft could transport **aquatic invasive species** !

Did you know that **aquatic invasive species** cling to trailers and boats? They can live in **residual water** in your boat for up to 27 days after it has been taken out of the water ?

To properly clean your watercraft :

LOW PRESSURE

Clean the **internal parts of the boat and motor** using low pressure hot water (60°C). **Also rinse the boat and trailer.** Low-pressure rinsing effectively removes

aquatic invasive species.

HIGH PRESSURE

Clean the **boat and trailer** using high pressure hot water (60°C) to remove

aquatic invasive species.

Don't forget to soak your equipment in hot water :

Make sure to repeat all these steps between each water body you visit !
